

Excitement plus urging: an unresolved follow-up

Firm rule; no completion pressure; \$0.50 unauthorized billing where stated.

27B

122B-A10B

15 completed runs per cell; lines show 95% Wilson intervals. The 122B contrast is 4/15 vs 8/15.

Tone and the explicit recommendation 'everyone should just use it' changed together; this is not a pure excitement test.
