

Does an agents' signature change rule following?

Original network rule; 15 fresh task runs per condition and batch.

● Unsigned recommendation (B) ■ Signed by agents (C)

Same recommendation; only its author line changes

Lines: 95% Wilson intervals within each fixed condition. All comparisons were exploratory.

The 27B pilot gap did not reproduce. The 122B gap is from one small batch, not a confirmed model difference.
